$$2 \operatorname{Bgtan} \frac{1}{3} = \operatorname{Bgtan} \frac{1}{3} + \operatorname{Bgtan} \frac{1}{3} = \operatorname{Bgtan} \frac{\frac{1}{3} + \frac{1}{3}}{1 - \frac{1}{3} \left(\frac{1}{3} \right)} = \operatorname{Bgtan} \frac{\frac{2}{3}}{\frac{9}{8}} = \operatorname{Bgtan} \frac{3}{4}$$

$$\Rightarrow \operatorname{Bgtan} \frac{1}{7} + 2 \operatorname{Bgtan} \frac{1}{3} = \operatorname{Bgtan} \frac{1}{7} + \operatorname{Bgtan} \frac{3}{4} = \operatorname{Bgtan} \frac{\frac{1}{7} + \frac{3}{4}}{1 - \frac{1}{7} \left(\frac{3}{4} \right)} = \operatorname{Bgtan} \frac{\frac{25}{28}}{\frac{25}{28}} =$$

$$\operatorname{Bgtan} 1 = \frac{\pi}{4}$$
