$$\begin{aligned}f(x) &= \frac{x^3}{x+2} \\f'(x) &= \frac{3x^2(x+2) - x^3}{(x+2)^2} \\&= \frac{3x^3 + 6x^2 - x^3}{(x+2)^2} \\&= \frac{2x^3 + 6x^2}{(x+2)^2}\end{aligned}$$
