$$\begin{aligned}f(x) &= \sqrt{ax + bx + c} \\f'(x) &= \frac{1}{2} (ax + bx + c)^{-\frac{1}{2}} \cdot D(ax + bx + c) \\&= \frac{1}{2} (ax + bx + c)^{-\frac{1}{2}} \cdot (2ax + b) \\&= \frac{2ax + b}{2\sqrt{ax + bx + c}}\end{aligned}$$
