$$f(x) = \sqrt{1-x^2} \operatorname{Bgsin}(x)$$

$$f'(x) = \sqrt{1-x^2} \cdot \frac{d}{dx}(\operatorname{Bgsin}(x)) + \operatorname{Bgsin}(x) \cdot \frac{d}{dx}(\sqrt{1-x^2})$$

$$= \sqrt{1-x^2} \cdot \frac{1}{\sqrt{1-x^2}} + \operatorname{Bgsin}(x) \cdot \frac{1}{2\sqrt{1-x^2}} \cdot \frac{d}{dx}(-x^2)$$

$$= 1 - \operatorname{Bgsin}(x) \cdot \frac{1}{2\sqrt{1-x^2}} \cdot 2x$$

$$= 1 -$$
