$$f(x) = 2^{x^2+1}$$

$$f'(x) = 2^{x^2+1} \cdot \ln(2) \cdot 2x$$

$$= x \cdot \ln(2) \cdot 2^{x^2+2}$$

$$f''(x) = \ln(2) \left[1 \cdot 2^{x^2+2} + x \cdot \left(2^{x^2+2} \cdot \ln(2) \cdot 2x \right) \right]$$

$$= \ln(2) \cdot \left[2^{x^2+2} + x \cdot \left(x \cdot \ln(2) \cdot 2^{x^2+3} \right) \right]$$
