$$\begin{aligned} & \int \frac{x}{\sin^2 x} dx \\ & \left\{ \begin{array}{l} u = x \\ dv = \frac{1}{\sin^2 x} dx \end{array} \right. \Rightarrow \left\{ \begin{array}{l} du = dx \\ v = -\cot x \end{array} \right. \\ & \int \frac{x}{\sin^2 x} dx = -x \cot x - \int (-\cot x) dx = -x \cot x + \int \frac{\cos x}{\sin x} dx \\ & = -x \cot x + \ln |\sin x| + c \end{aligned}$$

$$\text{Want } \int \cot x dx = \int \frac{\cos x}{\sin x} dx$$

$$u = \sin x \Rightarrow du = \cos x dx$$

$$\int \frac{1}{u} du = \ln |u| + c$$

$$\int \cot x dx = \ln |\sin x| + c$$
