$$\int \frac{1}{x} \ln(\ln x) dx$$

$$t = \ln x, dt = \frac{dx}{x}$$

$$\int \ln t dt$$

$$\left\{ \begin{array}{l} u = \ln t \\ dv = dt \end{array} \right. \Rightarrow \left\{ \begin{array}{l} du = \frac{dt}{t} \\ v = t \end{array} \right.$$

$$= t \ln t - \int dt$$

$$= t \ln t - t + c$$

$$= \ln x \ln(\ln x) - \ln x + c$$
