$$\int (2x - 7)^5 dx$$

$$\text{stel } t = 2x - 7$$

$$dt = 2dx \Rightarrow dx = \frac{dt}{2}$$

$$= \int t^5 \frac{dt}{2}$$

$$= \frac{1}{2} \cdot \frac{(2x - 7)^6}{6} + C$$

$$= \frac{(2x - 7)^6}{12} + C$$
