$$I = \int \frac{5dx}{(x-2)^2} = 5 \int \frac{1}{(x-2)^2}$$

Stel: $t = x - 2 \Rightarrow dt = dx$

$$= 5 \int \frac{1}{t^2} dt = \frac{5}{-1} \frac{1}{t^1} + c = \frac{-5}{t} + c = \frac{-5}{x-2} + c$$
