$$\int_0^{\frac{\pi}{4}} \tan x dx$$

$$\int \tan x dx$$

$$= \int \frac{\sin x}{\cos x} dx$$

Substitutie: $t = \cos x \Rightarrow dt = -\sin x dx$

$$= - \int \frac{1}{t} dt$$

$$= -\ln |\cos x| + c$$

$$\Rightarrow \int_0^{\frac{\pi}{4}} \tan x dx = -\ln \left| \cos \frac{\pi}{4} \right| + \ln |\cos 0| = -\ln \frac{\sqrt{2}}{2} + \ln 1 = -\ln \frac{\sqrt{2}}{2}$$
