$$f_n : \mathbb{R} \rightarrow \mathbb{R} : x \mapsto \frac{\sin(nx)}{n}$$

We bepalen eerst de puntsgewijze limiet:

$$\lim_{n \rightarrow \infty} f_n(x) = \lim_{n \rightarrow \infty} \frac{\sin(nx)}{n}$$

Omdat $-1 \leq \sin(nx) \leq 1$, geldt:

$$-\frac{1}{n} \leq \frac{\sin(nx)}{n} \leq \frac{1}{n}$$

Dus:

$$\lim_{n \rightarrow \infty} \frac{\sin(nx)}{n} = 0$$

Hieruit volgt:

$$f : \mathbb{R} \rightarrow \mathbb{R} : x \mapsto 0$$

$$f_n \xrightarrow{p} f$$

Nu onderzoeken we uniforme convergentie:

$$\begin{aligned} \|f_n - f\|_{\infty} &= \sup_{x \in \mathbb{R}} \left| \frac{\sin(nx)}{n} - 0 \right| \\ &= \sup_{x \in \mathbb{R}} \frac{|\sin(nx)|}{n} \\ &= \frac{1}{n} \end{aligned}$$

Daarom:

$$\begin{aligned} \lim_{n \rightarrow \infty} \|f_n - f\|_{\infty} &= \lim_{n \rightarrow \infty} \frac{1}{n} \\ &= 0 \end{aligned}$$

Dus:

$$f_n \xrightarrow{u} f$$
