Oefeningenreeks 6G nr. 2.1

$$f(x) = \begin{cases} 0 & \text{als } x \in [-\pi, 0[\\ 4 & \text{als } x \in [0, \pi[\\ 7 & \text{als } x \in \{-\pi, 0, \pi\} \end{cases}$$

We controleren eerst de symmetrie:

$$f(1) = 4 \text{ en } f(-1) = 0$$

$$\Rightarrow f(1) \neq f(-1)$$

$\Rightarrow f$ is niet even.

Ook geldt:

$$f(-1) = 0 \neq -4 = -f(1)$$

$\Rightarrow f$ is niet oneven.

Dus gebruiken we de algemene Fourierreeks:

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} (a_n \cos(nx) + b_n \sin(nx))$$

Voor a_0 geldt:

$$\begin{aligned} a_0 &= \frac{1}{\pi} \left(\int_{-\pi}^0 0 dx + \int_0^{\pi} 4 dx \right) \\ &= \frac{1}{\pi} \int_0^{\pi} 4 dx \\ &= \frac{1}{\pi} [4x]_0^{\pi} \\ &= 4 \end{aligned}$$

Voor a_n geldt:

$$\begin{aligned} a_n &= \frac{1}{\pi} \left(\int_{-\pi}^0 0 \cos(nx) dx + \int_0^{\pi} 4 \cos(nx) dx \right) \\ &= \frac{4}{\pi} \int_0^{\pi} \cos(nx) dx \\ &= \frac{4}{\pi} \left[\frac{\sin(nx)}{n} \right]_0^{\pi} \\ &= \frac{4}{\pi} \cdot \frac{\sin(n\pi) - \sin(0)}{n} \end{aligned}$$

$$= 0$$

Voor b_n geldt:

$$\begin{aligned} b_n &= \frac{1}{\pi} \left(\int_{-\pi}^0 0 \sin(nx) dx + \int_0^{\pi} 4 \sin(nx) dx \right) \\ &= \frac{4}{\pi} \int_0^{\pi} \sin(nx) dx \\ &= \frac{4}{\pi} \left[-\frac{\cos(nx)}{n} \right]_0^{\pi} \\ &= \frac{4}{\pi} \left(-\frac{\cos(n\pi)}{n} + \frac{\cos(0)}{n} \right) \\ &= \frac{4}{\pi} \cdot \frac{1 - (-1)^n}{n} \end{aligned}$$

Dus:

$$n \text{ even} \Rightarrow b_n = 0$$

$$n \text{ oneven} \Rightarrow b_n = \frac{8}{n\pi}$$

Daarom wordt de Fourierreeks:

$$f(x) = 2 + \sum_{n=1}^{\infty} \frac{4(1 - (-1)^n)}{n\pi} \sin(nx)$$

Alleen de oneven termen blijven over:

$$f(x) = 2 + \frac{8}{\pi} \sum_{n=0}^{\infty} \frac{\sin((2n+1)x)}{2n+1}$$
