$$f(x) = \begin{cases} 0 & \text{als } x \in [-\pi, 0] \\ 2 \sin x & \text{als } x \in]0, \pi] \end{cases}$$

$$a_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) dx$$

$$= \frac{1}{\pi} \int_0^{\pi} 2 \sin x dx$$

$$= \frac{2}{\pi} [-\cos x]_0^{\pi}$$

$$= \frac{2}{\pi} (1 - (-1))$$

$$= \frac{4}{\pi}$$

$$a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \cos(nx) dx$$

$$= \frac{1}{\pi} \int_0^{\pi} 2 \sin x \cos(nx) dx$$

$$= \frac{1}{\pi} \int_0^{\pi} (\sin((1+n)x) + \sin((1-n)x)) dx$$

Voor $n = 1$:

$$a_1 = \frac{1}{\pi} \int_0^{\pi} \sin(2x) dx = 0$$

Voor $n \neq 1$:

$$\begin{aligned} a_n &= \frac{1}{\pi} \left[-\frac{\cos((1+n)x)}{1+n} - \frac{\cos((1-n)x)}{1-n} \right]_0^{\pi} \\ &= \frac{2((-1)^n + 1)}{\pi(1-n^2)} \end{aligned}$$

Dus:

$a_n = 0$ voor oneven n

$$a_{2k} = \frac{4}{\pi(1-4k^2)}$$

$$b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \sin(nx) dx$$

$$= \frac{1}{\pi} \int_0^{\pi} 2 \sin x \sin(nx) dx$$

$$= \frac{1}{\pi} \int_0^{\pi} (\cos((1-n)x) - \cos((1+n)x)) dx$$

Voor $n = 1$:

$$\begin{aligned} b_1 &= \frac{1}{\pi} \int_0^\pi 2 \sin^2 x \, dx \\ &= \frac{1}{\pi} \int_0^\pi (1 - \cos 2x) \, dx \\ &= \frac{1}{\pi} \left[x - \frac{\sin 2x}{2} \right]_0^\pi \\ &= 1 \end{aligned}$$

Voor $n > 1$:

$$\begin{aligned} b_n &= \frac{1}{\pi} \left[\frac{\sin((1-n)x)}{1-n} - \frac{\sin((1+n)x)}{1+n} \right]_0^\pi \\ &= 0 \end{aligned}$$

Fourierreeks:

$$\begin{aligned} f(x) &\sim \frac{a_0}{2} + \sum_{n=1}^{\infty} (a_n \cos(nx) + b_n \sin(nx)) \\ f(x) &\sim \frac{2}{\pi} + \sin x + \sum_{k=1}^{\infty} \frac{4}{\pi(1-4k^2)} \cos(2kx) \end{aligned}$$
