$$f(x, y, z) = x^2 e^y \ln z$$

$$\frac{\partial f}{\partial x} = 2x e^y \ln z$$

$$\frac{\partial f}{\partial y} = x^2 e^y \ln z$$

$$\frac{\partial f}{\partial z} = \frac{x^2 e^y}{z}$$

$$Df = \begin{pmatrix} 2x e^y \ln z & x^2 e^y \ln z & \frac{x^2 e^y}{z} \end{pmatrix}$$
