$$f(x, y) = xy \quad \vec{a}(1, -1)$$

$$f(1, -1) = -1$$

$$Df(x, y) = \begin{pmatrix} y & x \end{pmatrix}$$

$$Df(1, -1) = \begin{pmatrix} -1 & 1 \end{pmatrix}$$

$$\Rightarrow z = -1 - (x - 1) + (y + 1)$$

$$= -x + y + 1$$
